Early Differentiating Enterocytes · A1 Rescue vs A1 Het
regulation of locomotion
supramolecular fiber organization
positive regulation of programmed cell death
actin filament−based process
tube morphogenesis
vasculature development
positive regulation of apoptotic process
blood vessel development
up_in_A1_Het
monocarboxylic acid metabolic process
small molecule biosynthetic process
lipid biosynthetic process
fatty acid metabolic process
response to xenobiotic stimulus
regulation of hormone levels
alcohol metabolic process
sulfur compound metabolic process
