TA Cells − G2/M · A1 Rescue vs KO
monocarboxylic acid metabolic process
nucleoside phosphate metabolic process
monoatomic ion transmembrane transport
generation of precursor metabolites and energy
organophosphate biosynthetic process
purine−containing compound metabolic process
small molecule biosynthetic process
fatty acid metabolic process
up_in_A1_Rescue
microtubule cytoskeleton organization
chromosome organization
chromosome segregation
organelle fission
cell cycle phase transition
nuclear division
regulation of mitotic cell cycle
vasculature development
