GO_MF | C
transcription coregulator activity
DNA−binding transcription factor binding
mRNA binding
transcription coactivator activity
transcription corepressor activity
catalytic activity, acting on DNA
histone binding
mRNA 3'−UTR binding
ATP−dependent activity, acting on DNA
single−stranded RNA binding
unfolded protein binding
general transcription initiation factor binding
basal transcription machinery binding
basal RNA polymerase II transcription machinery binding
translation regulator activity
pre−mRNA binding
poly−purine tract binding
ATP−dependent protein folding chaperone
eductase activity, acting on paired donors, with oxidation of a pair of donors resulting in the reduction of molecular oxygen to two molecules of water
adenyl−nucleotide exchange factor activity
