KEGG | Cybrd1+ ent | A1_Rescue_vs_KO | up in KO | n = 956
Carbon metabolism
Chemical carcinogenesis − reactive oxygen species
Biosynthesis of amino acids
Glycolysis / Gluconeogenesis
HIF−1 signaling pathway
Fluid shear stress and atherosclerosis
RNA degradation
Central carbon metabolism in cancer
Valine, leucine and isoleucine degradation
Pyruvate metabolism
Fatty acid metabolism
Fatty acid degradation
Metabolism of xenobiotics by cytochrome P450
Citrate cycle (TCA cycle)
Pentose phosphate pathway
2−Oxocarboxylic acid metabolism
