GO_MF | B
monoatomic cation transmembrane transporter activity
active transmembrane transporter activity
oxidoreductase activity, acting on paired donors, with incorporation or reduction of molecular oxygen
organic acid binding
carboxylic acid binding
iron ion binding
primary active transmembrane transporter activity
dioxygenase activity
modified amino acid binding
monosaccharide binding
transition metal ion transmembrane transporter activity
electron transfer activity
carbon−carbon lyase activity
NADP binding
glutathione transferase activity
oligopeptide binding
glutathione binding
quinone binding
peptidyl−proline dioxygenase activity
eductase activity, acting on paired donors, with oxidation of a pair of donors resulting in the reduction of molecular oxygen to two molecules of water
