KEGG | EEC | A1_Rescue_vs_A1_Het | up in A1_Rescue | n = 1309
Pathways of neurodegeneration − multiple diseases
Chemical carcinogenesis − reactive oxygen species
Amyotrophic lateral sclerosis
Parkinson disease
Alzheimer disease
Huntington disease
Prion disease
Diabetic cardiomyopathy
Thermogenesis
Ribosome
Non−alcoholic fatty liver disease
Oxidative phosphorylation
Retrograde endocannabinoid signaling
Carbon metabolism
Drug metabolism − other enzymes
Biosynthesis of amino acids
Glutathione metabolism
Cardiac muscle contraction
Chemical carcinogenesis − DNA adducts
Metabolism of xenobiotics by cytochrome P450
