Reactome | Fabp1+ ent | A1_Het_vs_
Metabolism of RNA
Cell Cycle, Mitotic
M Phase
Processing of Capped Intron−Containing Pre−mRNA
Mitotic Metaphase and Anaphase
Mitotic Anaphase
mRNA 3'−end processing
mRNA Polyadenylation
Mitotic Spindle Checkpoint
Glucose metabolism
Glycolysis
Eukaryotic Translation Initiation
Cap−dependent Translation Initiation
Translation initiation complex formation
L13a−mediated translational silencing of Ceruloplasmin expression
GTP hydrolysis and joining of the 60S ribosomal subunit
Activation of the mRNA upon binding of the cap−binding complex and eIFs, and subsequent binding to 43S
Ribosomal scanning and start codon recognition
Formation of the ternary complex, and subsequently, the 43S complex
RHOBTB1 GTPase cycle
