structural constituent of ribosome
antioxidant activity
tetrapyrrole binding
heme binding
monooxygenase activity
transferase activity, transferring alkyl or aryl (other than methyl) groups
peroxidase activity
oxidoreductase activity, acting on peroxide as acceptor
glutathione transferase activity
fatty acid binding
electron transfer activity
, acting on paired donors, with incorporation or reduction of molecular oxygen, reduced flavin or flavoprotein as one donor, and incorporation of one atom of oxygen
oligopeptide binding
glutathione binding
steroid hydroxylase activity
glutathione peroxidase activity
2 iron, 2 sulfur cluster binding
retinoic acid 4−hydroxylase activity
arachidonate epoxygenase activity
estrogen 16−alpha−hydroxylase activity
0.
Gene
