KEGG | Fabp1+ ent | KO_vs_WT | up in KO | n = 983
Pathways in cancer
Salmonella infection
Tight junction
Fluid shear stress and atherosclerosis
Leukocyte transendothelial migration
Influenza A
Cornified envelope formation
Adherens junction
Chemical carcinogenesis − DNA adducts
Platinum drug resistance
Metabolism of xenobiotics by cytochrome P450
Glutathione metabolism
Gastric acid secretion
Arachidonic acid metabolism
Drug metabolism − cytochrome P450
Valine, leucine and isoleucine degradation
Fatty acid degradation
Fat digestion and absorption
Virion − Hepatitis viruses
Fructose and mannose metabolism
