KEGG | Global | A1_Rescue_vs_A1_Het | up in A1_Rescue | n = 1830
Thermogenesis
Chemical carcinogenesis − reactive oxygen species
Parkinson disease
Diabetic cardiomyopathy
Prion disease
Non−alcoholic fatty liver disease
Oxidative phosphorylation
Chemical carcinogenesis − DNA adducts
Drug metabolism − other enzymes
PPAR signaling pathway
Metabolism of xenobiotics by cytochrome P450
Cardiac muscle contraction
Glutathione metabolism
Drug metabolism − cytochrome P450
Retinol metabolism
Arachidonic acid metabolism
Steroid hormone biosynthesis
Linoleic acid metabolism
Autoimmune thyroid disease
Allograft rejection
