KEGG | Stem cell | A1_Het_vs_WT | up in WT | n = 1484
Thermogenesis
Chemical carcinogenesis − reactive oxygen species
Chemical carcinogenesis − receptor activation
Non−alcoholic fatty liver disease
Carbon metabolism
Oxidative phosphorylation
Metabolism of xenobiotics by cytochrome P450
Chemical carcinogenesis − DNA adducts
Drug metabolism − other enzymes
Biosynthesis of amino acids
Glycolysis / Gluconeogenesis
Drug metabolism − cytochrome P450
Retinol metabolism
Fructose and mannose metabolism
Glycine, serine and threonine metabolism
ABC transporters
Starch and sucrose metabolism
Propanoate metabolism
Aminoacyl−tRNA biosynthesis
Arginine biosynthesis
