Reactome | TA | A1_Rescue_v
Transport of small molecules
Aerobic respiration and respiratory electron transport
Respiratory electron transport
Translation
Biological oxidations
Fatty acid metabolism
Mitochondrial translation
Mitochondrial ribosome−associated quality control
Mitochondrial translation termination
Mitochondrial translation elongation
Complex I biogenesis
Drug ADME
Phase II − Conjugation of compounds
Biosynthesis of the N−glycan precursor (dolichol lipid−linked oligosaccharide, LLO) and transfer to a nascent protein
Complex IV assembly
Cytoprotection by HMOX1
ROS and RNS production in phagocytes
Aspirin ADME
Plasma lipoprotein remodeling
Aflatoxin activation and detoxification
